## The Plumbers LeakStick Instructions Manual

### Directions For Use

The LeakStick is a unique standalone amplifier that is used in combination with its accessories to find hidden or subterranean leaks. Having a small, sturdy aluminum body with a single-handed push to listen button, the LeakStick allows the user to listen for plumbing leaks in all types of plumbing.

### **Instructions Manual**

#### **PowerOn/Off and Volume Control**

The knob on top of the handle serves as the on/off switch and volume control. Turn the knob clockwise to switch the power on. A green light in the middle of the side handle will indicate that the power is on.

The black button located next to the green light is to unmute the device. Press and hold the black button with your thumb to listen. When detecting leaks, hold down the mute button continuously. When the leak is located, release the button. The sound will then stop. Exercise caution when adjusting the volume control. Always start with low volume and work your way up to higher volume. Avoid using the maximum volume unless necessary.

#### **Charging the LeakStick**

Utilize the provided 5V charger and cable. Remove the dust cap and plug the USB cable into the wall charger. Then connect the cable end to the LeakStick charge plug located in the handle. Charge the LeakStick for a minimum of 2 hours. While charging, the indicator light on top of the handle will turn red. When fully charged, the indicator light will turn green. Both lights are positioned on top of the handle. Once charged, the LeakStick is ready for use.

#### **Connecting the Headphones**

Use the headphones included with The LeakStick. Plug the headphones into the headphone jack located on the bottom of the handle.

Please follow these instructions carefully to ensure proper assembly, charging, and usage of The LeakStick. If you have any further questions or concerns, feel free to contact our customer support at 818-436-2953 or [info@leaktronics.com](mailto:info@leaktronics.com).
